

What Does 752 Metric Tons of Carbon Mean to You?

752 Metric Tons of Carbon Can Be Compared to:

The Annual Electric Use of 100 Homes

Consuming 85,389 Gallons of Gasoline

Annual Emissions of 138 Vehicles

Consuming 1,749 Barrels of Oil

So far, the Eric Ryan Corporation's energy conservation measures (ECM's) at 15 different hotels are projected to eliminate over 752 metric tons of carbon dioxide emissions annually. These measures included lighting retrofits, low-flow faucet aerator installation, energy saving programmable thermostats, and occupancy controls.
